Technical Infrastructure & Security Audit

System Assessment & CISA Compliance Advisory for DHA College & School System (DHACSS)

WEB ENGINE	PHP CGI STATUS	CMS PLATFORM	FORM ENGINE
IIS 10.0	Action Reqd	WordPress	CF7 6.2.4

1. EXECUTIVE INFRASTRUCTURE AUDIT

Growva Business conducted a non-intrusive digital architecture assessment of the official web platform representing DHA Karachi and its institutional network (DHACSS). The system is hosted on Microsoft IIS 10.0 running a PHP backend layer to handle public communications and form submissions.

COMPONENT	DETECTED TECHNOLOGY	RISK PROFILE	SECURITY & OPERATIONAL STATUS
Server Engine	IIS 10.0 (Windows Server)	Moderate	Requires CGI module request filtering and strict patch alignment.
Runtime Environment	PHP (CGI Execution)	High Risk	Targeted under recent CISA Emergency Security Advisories.
CMS & Frontend	WordPress 7.1.3 / Bootstrap	Optimized	Frontend UI intact; backend API requires hardening.
Form Handler	Contact Form 7 v6.2.4.1	Attention	Requires server-side input sanitization against CGI exploits.
CDN & Shield	Cloudflare Proxy	Active	Provides perimeter caching; backend origin requires patching.

Urgent Security Advisory (CISA Directive Alignment):
As highlighted in CISA's official emergency alert regarding critical PHP vulnerabilities (**CISA Emergency Alert: Critical PHP Vulnerabilities**), PHP CGI installations running on Windows Server environments are vulnerable to remote code execution (RCE) and unauthorized command arguments. Immediate server-side patching and application-layer validation are advised for DHACSS portals.

2. ENTERPRISE INSTITUTIONAL SOLUTION: PROCEDURETRACKING

While website security protects public institutional branding, campus operations require modern, automated workflow systems. **ProcedureTracking** is Growva Business's flagship educational management CRM, designed specifically to digitize multi-campus school systems like DHACSS.

ProcedureTracking - Smart School Management Portal

A specialized SaaS ecosystem engineered for large-scale school networks in DHA Karachi, replacing manual administrative friction with automated digital workflows.

MODULE	OPERATIONAL IMPACT FOR DHACSS
Automated Fee Receipts	Instant digital receipt generation and SMS/App dispatch upon payment verification.
Parent Mobile App	Dedicated mobile portal for real-time attendance, announcements, and grade cards.
Attendance Sync	Automated daily attendance logging with immediate parent notification.
Centralized Governance	Multi-branch oversight for DHACSS Central Secretariat and campus heads.

3. RECOMMENDED ACTION PLAN & NEXT STEPS

To ensure DHACSS platforms maintain gold-standard security while modernizing parent communication, we recommend a two-phase implementation approach:

Phase 1: Web Security & Patching

Apply PHP CGI security hardening on IIS 10.0 server, update input handlers, and configure origin server rules.

Phase 2: ProcedureTracking Integration

Conduct a 10-minute executive presentation for the IT Directorate to demonstrate automated fee receipts and the Parent App.
